

Technological Framework for Forecasting Cryptocurrency Prices using the Long Short-Term Memory Algorithm

by David Riley

Introduction

- Motivation
 - Machine Learning Experience
 - Automated Trading System
- Requirements
 - Collection of real time market data
 - Persistent storage of market data
 - Data Aggregation
 - Model Development and Feature Engineering
 - Model Training and Experiment Tracking
 - Model Execution
 - Backend
 - Frontend

Time Series Forecasting:

- Autoformer (1)
- Long Short-Term Memory (LSTM)
 - Simplicity (High Level Libraries - TensorFlow/Keras)
 - Resources / Community Support
 - Adaptable to varying feature sets

Infrastructure:

- Databricks & MIFlow
- PostgresML
- Micro-Service Architecture

Technology Stack

- Timescale/PostgreSQL
- MIFlow - Model Training and Experiment Tracking
- MinIO - S3 Object Store
- Model Service (Python)
- Backend (Rust)
- Frontend (Angular 17 / Node.js)

ER-Diagram

Design and Implementation: Data Flow

- Collector (Kraken Websocket Api)
- Trade Table (Hypertable)
- Materialized View
 - Hourly Time Buckets
 - Open-, high-, low-, close-price, volume, trade count
- Model Service
 - Executes LSTM Model
- Backend
- Frontend Dashboard
 - Visualization of past values alongside with the forecasted close-price

```
1 CREATE MATERIALIZED VIEW ohlc_hour
2 WITH (timescaledb.continuous, timescaledb.create_group_indexes=TRUE,
   timescaledb.finalized=TRUE) AS
3 SELECT
4     time_bucket('1 hour', time) AS bucket,
5     symbol_id,
6     FIRST(price, time) AS open_price,
7     MAX(price) AS high,
8     MIN(price) AS low,
9     LAST(price, time) AS close_price,
10    SUM(volume) AS volume,
11    CAST(COUNT(*) AS INTEGER) AS count
12 FROM trade
13 GROUP BY bucket, symbol_id;
```

Design and Implementation: LSTM

- Feature Engineering

- Lags, Simple/Exponential Moving Averages, Holidays, Volume, Trade Count
- Cyclic Encoding (day of the month, hours, etc.)

- Model Tuning Script (Hyperparameter Tuning)

- Parameter Grid: learning rate, optimizer, epochs, loss, lookback, ...
- Tracking using MIFlow: Metrics, Plots, Model Architecture, Model

Improvements:

- Collector Error Handling (Network Outage, etc.)
- LSTM Evaluation additional Metrics: Precision & Recall
- Materialized View - 1min
- Rust and the integration of Python, Tensorflow Bindings
